

BIRD COLLISION CORPS

Protocol Cheat-Sheet

1. Imagine a 12 foot wide band around the base of the building. This is your survey zone.
2. Slowly walk down the center of that zone (approximately 6 feet from the base of the building), looking left and right 6 feet for any stunned, injured, or dead birds. Be sure to look under and around shrubs and landscaping.
3. If you find a **stunned** or **injured** bird, carefully place it into a paper or cloth bag, complete the injured bird slip, and deliver both ASAP to the Dane County Wildlife Center.
4. If you find a **dead** bird, place it into a plastic ziplock bag, complete and include the dead bird slip. Deliver to Russell Labs or SoWBA office, or put in your home freezer ASAP.
5. Submit data and photos(s) of birds that have hit the building in the **iNaturalist** project (Bird Collisions Corps - *project/site name*).
